Jericho Fragata

OBJECTIVE

To gain practical industry experience through On-the-Job Training, applying my skills in computer engineering, embedded systems, and hardware prototyping while contributing to innovative projects and developing professional growth.

SCHOOL

2023 - Present Tertiary	**Cagayan State University - Carig Campus** Carig Sur, Tuguegarao City, Cagayan
2017 - 2023 Secondary	**Bambang National High School** Bambang, Nueva Vizcaya With Honor
2011 - 2017 Primary	**Cawacao Elementary School** Sto. Domingo West, Bambang Nueva Vizcaya With Honor

PROJECT

PIC Development Board (PIC Microcontroller, Breadboarding, PCB Design)
- Designed and implemented a custom development board using PIC microcontroller
- Programmed digital I/O functions and tested embedded applications
- Provided a platform for learning and testing microcontroller-based systems

Line Following Robot (Arduino Project, Sensors)
- Designed and built an autonomous line-following robot using Arduino Nano, QTR-8A sensors, and TB6612FNG motor driver
- Implemented sensor-based path detection and motor control for accurate navigation
- Optimized speed and stability for competition performance

Barangay Vaccination and Appointment System (Web Development: HTML, CSS, JavaScript, PHP, Python, MySQL)
- Developed a web-based system for vaccination scheduling and patient record management using PHP and MySQL.
- Implemented appointment booking, user authentication, and administrative reporting features.
- Improved the efficiency of barangay healthcare services through digital record management.

Regulated DC Power Supply (5V, 12V, & Adjustable)
- Built a multi-rail power supply providing 5V, 12V, and variable voltage outputs for electronics testing.
- Performed component-level assembly and rigorous testing to ensure stable performance

SKILL

- **Programming**: oriented with Python and Javascript, C++ ,HTML
- **Embedded Systems**: Proficient in Arduino and PIC microcontroller programming
- **Electronics**:Proficient in Breadboarding, circuit prototyping, and basic troubleshooting
- **Hardware Design**: Oriented with PCB layout and design for academic projects
- **Problem Solving**: Able to analyze basic technical problems and assist in developing practical solutions.
- **Computer Skills**: Proficient in Microsoft Office (Word, PowerPoint, Excel) and basic documentation for technical reports.
